Question 3 [25 points]:

a) Prove that

$$P(X | MB(X)) = \alpha P(X | U_1, ..., U_m) \prod_{Y_i}^{n} P(Y_i | Z_{i1}, ...)$$

where MB(X) is the Markov Blanket of variable X.

The probability of the Markov Blanket of variable X can be written as:

$$P(U_{1},...,U_{m},X,Y_{1},...,Y_{n},Z_{11},...,Z_{nj})$$

$$=P(U_{1}\cap...\cap U_{m}\cap X\cap Y_{1}\cap...\cap Y_{n}\cap Z_{11}\cap...\cap Z_{nj})$$

$$=\left[\prod_{i=1}^{m}P(U_{i})\right]P(X\mid U_{1},...,U_{m})\left[\prod_{i=1}^{n}P(Y_{i}\mid X,Z_{i1},...,Z_{ij})\prod_{k=1}^{j}P(Z_{ik})\right]$$

The Markov Blanket of variable *X* is the set:

$$MB(X) = \{U_1, ..., U_i, Y_1, ..., Y_n, Z_{11}, ..., Z_{ni}\}$$

The conditional probability of X given MB(X) can be written as:

$$P(X | MB(X)) = \frac{P(X \cap MB(X))}{P(MB(X))}$$

The numerator $P(X \cap MB(X))$ is equivalent to the probability of the Markov Blanket of variable X:

$$\left[\prod_{i=1}^{m} P(U_i)\right] P(X \mid U_1, ..., U_m) \left[\prod_{i=1}^{n} P(Y_i \mid X, Z_{i1}, ..., Z_{ij}) \prod_{k=1}^{j} P(Z_{ik})\right]$$

The denominator P(MB(X)) can be written as:

$$\begin{split} P(U_1, ..., U_m, Y_1, ..., Y_n, Z_{11}, ..., Z_{nj}) \\ &= P(U_1 \cap ... \cap U_m \cap Y_1 \cap ... \cap Y_n \cap Z_{11} \cap ... \cap Z_{nj}) \\ &= [\prod_{i=1}^m P(U_i)] [\prod_{i=1}^n \sum_{x} P(Y_i | X, Z_{i1}, ..., Z_{ij}) \prod_{k=1}^j P(Z_{ik})] \end{split}$$

Thus we have:

$$P(X \mid MB(X)) = \frac{\left[\prod_{i=1}^{m} P(U_{i})\right]P(X \mid U_{1}, ..., U_{m})\left[\prod_{i=1}^{n} P(Y_{i} \mid X, Z_{i1}, ..., Z_{ij})\right]\left[\prod_{i=1}^{n} \prod_{k=1}^{j} P(Z_{ik})\right]}{\left[\prod_{i=1}^{m} P(U_{i})\right]\left[\prod_{i=1}^{n} \sum_{x} P(Y_{i} \mid X, Z_{i1}, ..., Z_{ij})\right]\left[\prod_{i=1}^{n} \prod_{k=1}^{j} P(Z_{ik})\right]}$$

$$= \frac{P(X \mid U_1, ..., U_m)[\prod_{i=1}^n P(Y_i \mid X, Z_{i1}, ..., Z_{ij})]}{[\prod_{i=1}^n \sum_{x} P(Y_i \mid X, Z_{i1}, ..., Z_{ij})]}$$

And if $\frac{1}{[\prod_{i=1}^n \sum_x P(Y_i|X,Z_{i1},...,Z_{ij})]}$ equals the normalization constant α , then:

$$P(X \,|\, MB(X)) = \alpha P(X \,|\, U_1, ..., U_m) [\prod_{i=1}^n P(Y_i \,|\, X, Z_{i1}, ..., Z_{ij})]$$
